

# Mohammad Danish Ansari

AI / Machine Learning Engineer | Data Scientist

Noida, UP, India | +91 7300969491 | danishansari.dev@gmail.com | linkedin.com/in/danishansari-dev | github.com/danishansari-dev

## Education

### Indian Institute of Information Technology, Dharwad

2022 – 2026

B.Tech in Data Science and Artificial Intelligence

*Relevant Coursework:* Machine Learning, Deep Learning, NLP, Computer Vision, Linear Algebra, Probability & Statistics, Data Structures & Algorithms, DBMS, OS

## Technical Skills

**Machine Learning & Deep Learning:** PyTorch, TensorFlow, scikit-learn, CNNs, Computer Vision, Feature Engineering, Model Optimization & Compression

**Generative AI & NLP:** Large Language Models (LLMs), RAG, OpenAI API, Groq API, Vector DBs (pgvector), Hugging Face, TextRank, LSA, Prompt Engineering

**Data Science & Analytics:** Python, SQL, pandas, NumPy, Power BI, Matplotlib, Seaborn, Automated Data Pipelines, EDA

**MLOps & Infrastructure:** FastAPI, Flask, Docker, RESTful APIs, Streamlit, Pytest, Git, GitHub Actions (CI/CD), PostgreSQL, Vercel, Railway, Linux

## Experience

### Software Engineer Intern

Jan 2024 – Mar 2025

Scrunch and Create – E-Commerce Platform

*scrunchcreate.com*

- Architected and maintained a full-stack e-commerce platform using React, Vite, and Python, managing 200+ catalog SKUs and supporting 500+ customer orders.
- Built an automated Python image processing pipeline for batch asset optimization across 1,000+ product images, cutting manual processing time by 80%.
- Designed responsive React + Vite frontend interfaces and backend API integrations, achieving sub-2s page load speeds and a 4.5-star user satisfaction rating.
- Implemented a zero-overhead serverless data management architecture, managing product inventory and order tracking with 100% operational uptime and \$0 infrastructure expenditure.
- Optimized overall application performance and CI/CD pipelines via GitHub Actions, accelerating deployment cycles by 60% and elevating user experience.

## Projects

### Disease Prediction System – Multi-Model ML Health Diagnostic Platform

2026

*disease-prediction-app.streamlit.app* [github.com/danishansari-dev/Disease-Prediction-Based-On-Symptoms](https://github.com/danishansari-dev/Disease-Prediction-Based-On-Symptoms)

- Developed an end-to-end medical diagnostic platform classifying **41 disease categories** from **132 binary symptom inputs** categorized into 6 body system domains.
- Trained and benchmarked 5 ML algorithms (**Random Forest, XGBoost, Decision Tree, KNN, MLP Neural Network**) into a consensus view engine generating calibrated top-5 differential diagnosis probabilities.
- Reduced model artifact sizes by **~98%** (e.g., KNN model compressed from 35MB to 0.68MB) via `joblib` level-3 compression and achieved sub-second UI latency using Streamlit memory caching.
- Engineered automated unit testing pipelines with **pytest** to validate symptom metadata schema integrity, feature extraction, and prediction accuracy.

### AI GitHub Analyzer – Developer Analytics & LLM Tool

2025 – 2026

*ai-github-analyzer.vercel.app* [github.com/danishansari-dev/ai-github-analyzer](https://github.com/danishansari-dev/ai-github-analyzer)

- Developed full-stack AI evaluation platform reducing candidate repository audit time from 10+ mins to sub-3s using async PyGithub data extraction and Groq LPU fast inference (LLaMA 3.3 70B).
- Built automated portfolio assessment engine parsing repo metadata and commit patterns to compute job-fit scoring models across 5 tech roles.
- Designed responsive React + Tailwind CSS web interface displaying dynamic score visualization charts and automated resume bullet generation.
- Deployed backend service on Railway and frontend on Vercel with environment security configuration and rate-limited request handling.

### NeuralRead – Chrome Extension & Generative AI SaaS Platform

2025 – 2026

*neural-read-dashboard.vercel.app* [github.com/danishansari-dev/neural-read](https://github.com/danishansari-dev/neural-read)

- Engineered a hybrid retrieval engine combining Extractive Summarization (TextRank/LSA) with Semantic Vector Search (OpenAI Embeddings + Supabase **pgvector**) executing sub-150ms similarity queries.
- Built dynamic React dashboard with D3.js force-directed knowledge graph visualization rendering semantic topic clusters in real time.
- Architected Manifest V3 Chrome extension with content scripts for DOM extraction and background service workers for API communication.

## Leadership & Community Engagement

### Creative Team Lead, OStech Club – IIIT Dharwad

2024 – 2025

Directed a cross-functional team of 10+ members in organizing campus-wide technical workshops and hackathons impacting 500+ students across departments; oversaw end-to-end digital publicity campaigns and event operations.
